Incorporating the Australian, HACCP endorsed Pest Free® systems

## The Pest Free EKOmille System

The introduction of the Pest FREE range of products into the African market has paved the way for the introduction of our latest state of the art system, **The Pest Free EKOmille**. The Pest Free electronic rodent control systems have for 21 years been used internationally to "CHASE" rodents away from the areas where the systems have been installed. Simply put, making the problem someone else's.

Due to the concerns about the ever growing rodent population worldwide we have developed a system to work in conjunction with the Pest Free rodent control units that actually "CATCHES" and kills the caught rodents in 100% pesticide free, environmentally friendly and humane manner. This allows you the client to actually see the effect your Pest Free rodent control system is having in your premises, by seeing the actual number of rodents caught in the **Pest Free EKOmille** system.

For monitoring and audit requirements catch counts are relayed to your monthly reports and trend sheets that now don't only indicate activity levels but the actual number of rodents caught.

### How it works:

The Pest Free EKOmille system comprises of two sections, the upper section is the feeding platform, sensor and turning mechanism. The lower chamber is the catchment area which contains our patented solution.

Rodents are lured to the

feeding platform, when the sensor is activated the turning mechanism drops them into the lower chamber. The solution acts as a "stun" agent which causes them to die within seconds. The solution is also a preservative thus prevents decay which in turn results in no rotting smell.

Each time the turning mechanism is activated the external counter for your monitoring clicks over thus indicating how many rodents have been caught from the time of the last service.

The system has an internal battery that operates the turning mechanism; there is a battery test switch which allows you to see if the battery needs to be replaced. Battery replacement is part of the service package on offer.

## Bait used:

Any type of food product, (preferably dry foodstuff) that rodents feed on can be used as "bait" in the Pest Free EKOMILLE system. This flexibility allows you to change "bait" as rodents change their types of preferred food.

## Visually appealing:

There are various options available as covers specifically designed to meet each client's needs.

The container is floor or wall mountable and lockable thus rendering the Pest Free EKOMILLE less vulnerable to damage, theft and vandalism.

The stainless steel finish is easy on the eye in any customer related industry where discretion is of utmost importance. The Pest Free EKOMILLE system can be used to replace the unsightly perimeter bait stations present around most buildings thus enhancing your company image.

## ADVANTAGES OF USING PEST FREE EKOMILLE AS YOUR MONITORING AND ENTRAPMENT SYSTEM

The Pest Free EKOMille is the most effective, safest and most hygienic way to maintain your monthly rodent activity reports. The system advantages compared to conventional bait stations are as follows:

- Pest Free EKOMille does not require any poison baits to be placed in it, it use 100% natural, and unlimited baits/Food that rodents feed on.
- As opposed to conventional bait stations, which are used to poison rodents, the Pest Free EKOMille system actually catches the rodents thus reduces the population and activity levels.
- Used in conjunction with the Pest Free electronic control units the Pest Free EKOMille presents as the "catcher" device. Hence in a premises equipped with both these 100% chemical free systems, you are equipped with a "chaser" and a "catcher".
- Completely biological and environment-friendly (no poison)
- Safe for children, the workplace and animals.
- No corpses lying around in inaccessible areas.
- No smell of decaying rodents.
- HACCP/ BRC suitable.
- Ideal for monitoring and entrapment.
- Minor maintenance required (service plans available to suit your needs)
- Suitable indoors and outdoors.
- Counter dial to indicate number of rodents caught.
- Stainless steel mounting box disguises the system to the public eye.

## Monthly Service Plan:

Including but not limited to:

- Battery replacement
- Bait/food replenishment
- Removal of caught rodents
- Replenishment of solution
- General cleaning of equipment and reporting on catch rates.
